

Rob Das, BSc, I.S.P., ITCP

(587) 334-1024

robdas1@gmail.com

Jun 2026

Professional Summary

As a highly experienced professional software developer, I've used my combination of computing science degree, I.T. training, and years of progressive industry experience with mission critical, enterprise environments, to deliver solutions that address specific business needs. By specializing in the applications domain, I've gained valuable experience across all aspects of the design, deployment, and operations lifecycle. My soft skills include systematic, methodical problem solving, diplomatic people skills, and clear, logical communication.

Education

University of Alberta – Bachelor of Science, Specialization in Computing Science, Software Design

Lord Beaverbrook High School – Advanced High School Diploma with First Class Honors

Alberta Education – Alexander Rutherford Scholarship for Academic Achievement

Certifications

- [Microsoft AI Fundamentals](#)
- [Microsoft Azure Fundamentals](#)
- [Microsoft Azure Developer](#)
- [CIPS certified ITCP](#)
- [CIPS certified I.S.P.](#)
- [Microsoft Certified Professional](#)
- [Java Certified Programmer](#)
- [Business Analysis Essentials](#)
- [Docker Foundations Professional](#)
- [Python Professional Certificate](#)
- [ITIL Foundation](#)
- [Oracle DBA OCP](#)
- [Oracle Developer OCP](#)

Current Technical Skills

- Agile, Scrum, Kanban
- AI Pair Programming with GitHub Copilot, Gemini, and ChatGPT
- ASP.NET MVC, MVC .NET
- Asynchronous Programming
- Azure App Services, Azure Functions, APIM, Cloud-Native, Serverless Development
- C Programming Language
- C# .NET, .NET Core Web Development
- Common Design Patterns
- COTS Package Implementation & Customization
- Database Migration & Schema Conversion
- Database Scripting, T-SQL, PL/SQL
- Database Systems, SQL Server, Oracle, Cosmos DB, DB2, Ingres, MS Access

- DevOps, Azure DevOps, Boards, Repos, Pipelines, Jira
- Disaster Recovery Planning (DRP)
- Docker Containers
- Domain Driven Design
- ERP, Banner (SCT Banner), Oracle PeopleSoft
- Frontend Frameworks, React, Angular, Bootstrap, jQuery
- HTML5, CSS3, JavaScript (ES6+)
- Hyper-V Architecture, Hypervisors
- Ingres Relational Database, Ingres 4GL, Quel, Embedded SQL, Ingres Report Writer
- ISA95 Manufacturing Execution Systems
- Microservices Architecture
- Microsoft Entity Framework, EF Core, NHibernate, LINQ
- Node, NPM, NPM Packages, RxJS, NgRx
- Operating Systems, VAX/VMS, Unix, Linux, Windows Server, MTS
- Oracle, Oracle Forms and Reports, Oracle Apex, PL/SQL
- Programming Paradigms, Object-Oriented (OOP/OOD), Functional, Procedural, Reactive Programming
- RESTful API, Web API
- Scripting Languages, PowerShell, Python, Perl, Bash, DCL
- Security & Access Management, Active Directory, Microsoft Entra ID, Microsoft Identity Platform, Azure Key Vault, OAuth 2.0, OIDC, MSAL
- SOA, Service-Oriented Architecture
- Software Development Life Cycles (SDLC), Waterfall, Rational Unified Process (RUP / UP), Extreme Programming (XP), Iterative & Incremental, Agile, Scrum, Kanban
- Software Engineering, Software Design, Reverse Engineering
- Software Testing, System Integration Testing, TDD, Unit Testing, Regression Testing, Defect Tracking, NUnit, XUnit, Jasmine, Karma, NSubstitute, Moq, Selenium
- State Management, Redux, NgRx, React Hooks, Cookies, ASP.NET ViewState
- Systems Analysis, Business Analysis
- UI, UX Wireframing, Accessibility
- Version Control Systems, Git, GitHub, Azure Repos, Bitbucket, Subversion (SVN), TortoiseSVN, TFS, Team Foundation Server, SourceSafe, CMS (VAX/VMS), RCS (Unix)
- Visual Studio, VS Code
- Web, Database Programming
- Web Development, Full Lifecycle
- WSUS

Experience (2001 – 2026)

1. DTEK Consulting Services Ltd (2009 – Now)

Full-Stack Developer, I.T. Consultant, General Manager

- Delivered complex enterprise solutions for a diverse portfolio of major public and private sector clients.
- Maintained continuous professional engagement through a strategic mix of high-value client contracts, internal projects, and rigorous technical certification.
- More information: <https://rob-das-win.azurewebsites.net/about>

Clients to Date

Internal Projects

Completed all work on the following research and development projects:

Infrastructure Project #2, Systems Analyst (Jan 2025 – May 2026)

- Active Directory domain migration and I.T. infrastructure realignment project.
- Executed an Active Directory domain migration to resolve critical metadata corruption and systemic replication failures.
- Completed a comprehensive overhaul of the corporate I.T. environment to replace a failing legacy domain and unstable host architecture.
- Restored full synchronization integrity and high-availability identity services across the Active Directory domain.
- Re-engineered the server tier by migrating services from overloaded physical hosts to a dedicated Hyper-V virtualization layer.
- Isolated application services into separate virtual machines to improve overall system stability and security.
- Managed a fleet-wide upgrade to modern Windows versions using registry-level deployment strategies to bypass hardware constraints.
- Extended the lifecycle and return on investment of existing hardware assets through custom deployment configurations.
- Integrated Linux Mint into the Windows-centric domain to create a stable, dual-platform environment for development and research.
- Centralized administrative control by implementing WSUS to automate patch management across the network.
- Modernized Server Manager workflows to reduce manual overhead and ensure environment-wide compliance.
- Tools used: AD DS; DNS Manager; Hyper-V; Linux; Server Manager; WSUS; PowerShell; GenAI Tools;
- More information: <https://robidas.github.io/static-site/ad-2025.pdf>

AzureDev Function App Split, Full-Stack Developer (Nov 2024 – Dec 2024)

- Executed a strategic architectural split of the AzureDev project into two separate repositories: a web application and a standalone Function App microservice.
- Migrated the serverless backend from .NET 6 to .NET 8 to resolve deprecation issues with the legacy In-Process worker model.
- Re-engineered all RESTful API endpoints using the .NET Isolated Worker model to ensure compatibility with modern Azure hosting standards.
- Managed a manual code migration after determining the .NET Upgrade Assistant could not automate the transition for the specific function architecture.
- Decoupled the API project from the primary solution to simplify the codebase and enable independent deployment and maintenance.
- Refactored the database access layer to utilize a more efficient design pattern for interacting with Azure Cosmos DB.
- Configured new Azure Function App instances in the portal to support the shift from in-process execution to the isolated process model.
- Hardened database security by implementing Azure API Management (APIM) as a reverse proxy for the serverless backend.

- Integrated the Microsoft Identity Platform and Azure Key Vault to manage secure authentication and sensitive configuration settings.
- Validated the new microservice architecture by performing end-to-end testing of the communication between the web front-end and the split API.
- Tools used: C#; .NET 8; Azure Functions (Isolated Worker); Cosmos DB; Azure APIM; Azure Key Vault; Microsoft Identity Platform; REST APIs;
- More information: <https://rob-das-win.azurewebsites.net/html/README.html#appendix-4---replacing-azuredev.functionapp-with-standalone-function-app>

UI/UX Project #2, Full-Stack Developer (Apr 2024 – Dec 2024)

- Redeveloped the project as DTEK Online Shopping, this time with Angular on GitHub pages.
- Completed a ground-up rewrite of the DTEK Online Shopping platform using Angular 18, transitioning the application from a React library to a full-featured framework.
- Published the project as a public Open Source repository to showcase high-quality, enterprise-standard source code and professional documentation.
- Established an Open Source framework for the project by including a standardized License, Code of Conduct, and Contribution guidelines.
- Managed application state and asynchronous data flows by implementing the Redux design pattern with NgRx and RxJS Observables.
- Simplified the application structure by utilizing standalone components to eliminate NgModules and reduce boilerplate.
- Built a responsive and accessible user interface using the Bootstrap 5 framework.
- Engineered a reusable "Toast" notification service to provide consistent, non-intrusive pop-up messages for user feedback.
- Maintained high code quality and consistent styling by implementing automated linting tools for TypeScript.
- Used GitHub Copilot and ChatGPT as AI pair-programming partners to accelerate the mastery of the Angular framework.
- Verified the accuracy of AI-generated code by achieving nearly 100 percent unit test coverage with Karma and Jasmine.
- Utilized Jasmine Spies and mocked sub-components to isolate units of logic and ensure reliable testing results.
- Validated technical solutions by cross-referencing AI outputs against Microsoft Copilot and official documentation.
- Debugged application state and logic using Redux DevTools and browser-based diagnostic utilities.
- Managed the development and deployment lifecycle using Git and the Angular CLI to host the site on GitHub Pages.
- Tools used: Angular; TypeScript; NgRx; RxJS; Redux; Bootstrap 5; Karma; Jasmine; ESLint; GitHub Pages; GenAI Tools;
- More information: <https://github.com/robdas1/ng-shopping>

UI/UX Project #1, Full-Stack Developer (Jun 2023 – Mar 2024)

- Developed DTEK Online Store, an eCommerce simulation site, exploring hosting React apps on Azure.
- Followed the official React documentation's recommended design approach to build the application from the ground up.
- Defined the application's functional scope and business logic through a formal Design Document before starting development.

- Translated business requirements into technical specifications by creating detailed data model diagrams and site maps.
- Established a high-quality UI/UX foundation by producing professional wireframe layouts for every major application view.
- Deconstructed the user interface into a logical component hierarchy to ensure code reusability and maintainability.
- Implemented core eCommerce patterns, including a dynamic shopping cart and product catalog, using Built-in React Hooks.
- Managed complex navigation and dynamic content rendering by implementing React Router with custom route parameters.
- Integrated and styled third-party libraries to handle user feedback notifications and modal confirmation workflows.
- Executed the production deployment to Azure App Service by configuring a specialized React-optimized environment.
- Conducted a hands-on containerization feasibility study, building and testing Docker images on Azure to analyze hosting efficiencies before directing a business decision to deploy via native Azure App Service environments.
- Authored a comprehensive User Manual to guide end-users through the simulated shopping and checkout experience.
- Produced a detailed Maintenance Guide including build instructions, troubleshooting procedures, and operational support protocols.
- Tools used: React; Built-in React Hooks; HTML/CSS/JS; JSX; Azure App Service; Azure DevOps; Docker; UI/UX Design;
- More information: <https://rob-das-win.azurewebsites.net/Documentation/OnlineStore>

Azure Cloud Project, Full-Stack Developer (Jan 2022 – May 2023)

- Completed the AzureDev Project migrating on-prem corporate website to the cloud; modernized architecture using app services, APIs, and microservices while securing it with Entra ID and Key Vault.
- Executed a solo 18-month research and development project to engineer a blueprint for migrating on-premise .NET/IIS applications to a serverless cloud architecture.
- Managed the full project lifecycle as the sole architect, developer, and project manager, from initial prototyping to final production deployment.
- Authored a 22-section technical project report and four appendices detailing the full cloud migration methodology and architectural standards.
- Refactored a legacy monolithic system into a high-availability microservice ecosystem using Azure Functions and App Services.
- Designed a scalable data layer using Azure Cosmos DB, implementing the NoSQL "Container" model for enterprise-grade data management.
- Engineered a secure backend using C# and .NET with Entity Framework Core (EF Core) and LINQ for database operations.
- Implemented industry-standard OAuth 2.0 and OpenID Connect protocols through Microsoft Entra ID to secure all cloud endpoints.
- Established a "Zero-Trust" security framework by centralizing secrets and connection strings within Azure Key Vault.
- Deployed Azure API Management (APIM) as a unified, secure gateway for all internal and external microservice communication.
- Automated the development lifecycle by creating multi-stage YAML CI/CD pipelines within Azure DevOps.
- Developed a comprehensive library of PowerShell scripts for "Infrastructure as Code" (IaC) to ensure repeatable cloud resource provisioning.

- Produced high-level architectural diagrams to document the relationship between the web front-end, API layer, and database
- Tools used: C#; .NET; ASP.NET Core; Azure Functions (In-Process); Azure App Services; Azure Cosmos DB; NoSQL; Microsoft Entra ID (Azure AD); Azure Key Vault; Azure API Management (APIM); Entity Framework Core (EF Core); LINQ; MSAL.NET; Microsoft Identity Platform; OAuth 2.0; OpenID Connect; JWT; Azure DevOps; YAML; CI/CD Pipelines; Git; PowerShell; Azure CLI; Azure Portal; Windows PowerShell; PowerShell ISE; Visual Studio; Visual Studio Code; JSON; XML; HTML5; CSS3; JavaScript; RESTful APIs; Postman; cURL; HTTP/HTTPS; FTP/FTPS; TCP/IP; DNS Configuration; SSL/TLS Certificates; IIS (Internet Information Services); Windows Server;
- More information: <https://rob-das-win.azurewebsites.net/html/README.html>

Certification-Based Research and Study (May 2020 – Dec 2021)

- Professional development: strategic skill realignment, full time researcher, author.
- Passed AZ-900, AZ-204 exams to earn the designation "Microsoft Certified Azure Developer".
- Engaged in a 19-month, full-time professional development and research leave to expand DTEK's core consulting competencies to the Microsoft Azure cloud ecosystem.
- Dedicated several thousand hours of intensive technical study, architectural analysis, and hands-on lab work through the Microsoft Learn sandbox environments, LinkedIn Learning, Pluralsight, SkillSoft, YouTube, Microsoft's online documentation, W3Schools, Udemy, CodeAcademy, and many others.
- Curated and optimized high-volume technical data from Microsoft Learn, professional training platforms, and industry conferences into a structured knowledge base.
- Authored and published a comprehensive technical textbook, "Exam Prep AZ-204: Developing Solutions for Microsoft Azure," based on over a year of intensive architectural research.
- Managed the end-to-end publication process for the textbook, including content compilation, editing, and self-publishing via GitHub.
- Published the final textbook as an open-source community resource to assist other senior developers in mastering cloud-native architecture.
- Attended Microsoft Ignite and other industry forums to evaluate emerging cloud trends and the evolution of the .NET ecosystem.
- Textbook Link: <https://robidas.github.io/static-site/Exam-Prep-AZ-204.pdf>

2. EPCOR Utilities (Dec 2018 – Apr 2020)

Full-Stack Software Developer, Technical Lead

- Consulting contract at EPCOR, a Canadian utilities company, working with the CRM team to provide development and operational support to applications including My Accounts, PMDB, and GeoFIT.
- Served as Technical Lead for the Performance Monitoring Database (PMDb) project, leading a cross-functional team of analysts, DBAs, developers, and subject matter experts for the Energy Services call center, replacing a legacy Access application with an Oracle APEX web solution.
- Facilitated Joint Application Design (JAD) sessions with stakeholders to define business data objects, user stories, and security requirements.
- Engineered a role-based access control system to secure sensitive employee performance data in PMDB, by linking PMDB to the enterprise HR platforms, to get reporting lines used to enforce employee confidentiality.
- Developed responsive frontend modules for PMDB using Oracle APEX and JavaScript, while encapsulating business logic in modular PL/SQL packages.
- Designed and executed an ETL pipeline using T-SQL and PL/SQL to migrate legacy customer service data into PMDB's centralized Oracle environment.

- Created scheduled tasks for PMDB to send email notifications for significant events, and provide an aging mechanism for employee data.
- Created an ETL process to import legacy system data into PMDB.
- Enhanced the My Accounts customer portal by developing a power outage notification wizard and upgrading the customer engineering services module.
- Developed a fire hydrant flags component for the GeoFIT asset management application to improve field service tracking.
- Provided development, testing, and deployment services to other applications as needed.

Tools used: Angular; ASP.NET MVC Core; Azure DevOps; Bootstrap Framework; C#; Entity Framework; Git; HTML/CSS/JavaScript; IIS; Jenkins; Jira; jQuery; LINQ; Node/npm; Octopus; Oracle APEX; PowerShell; React; Serilog & Seq Logging; SQL Server; Subversion; TOAD; TypeScript; Visual Studio/VS Code; Windows Server

Best practices: agile scrum; code reviews; enterprise architected environment; ETL/data migration; JAD facilitation; low code development; object-oriented programming; quarterly release management; requirements analysis; software design; technical documentation; UI/UX design; unit testing; version control systems; web portal development

Database: SQL Server; Oracle

3. DTEK Consulting Services Ltd (Jan 2018 – Nov 2018)

Independent Research and Study

- Professional development activities: full-time researcher, systems architect, software developer.
- Updated the company's corporate network infrastructure, previously created in 2015, to more closely replicate common enterprise environments by using the Hyper-V virtualization framework hosting virtual machines to serve as domain controllers, file, database, TFS, web, batch job, and application servers.
- Redesigned, developed and deployed the company's corporate website to the new network infrastructure using the 2018 versions of .NET Core, Bootstrap, React and Angular.

4. APEGA (Nov 2016 – Dec 2017)

Full-Stack Web Developer

- Consulting contract at APEGA, the Association of Professional Engineers and Geoscientists of Alberta, working with the application development team in the role of senior developer, assisting with the Registration Renewal Competency Based Assessment (CBA) project, for APEGA's self-service center portals.
- Completed a comprehensive refactoring of a legacy ASP.NET "website" architecture, transitioning hard-wired components into a modular, maintainable system using SOLID object-oriented design principles.
- Designed and implemented a robust domain service layer to decouple complex business logic from the user interface, enabling the creation of standalone, verifiable blocks of code.
- Engineered a sophisticated data access strategy using the Repository and Façade design patterns to encapsulate legacy code and separate application concerns from the underlying SQL Server database.
- Established a high-standard Quality Assurance culture by introducing comprehensive unit testing using NUnit and NSubstitute, achieving verifiable code coverage for mission-critical registration workflows.
- Utilized Models and ViewModels to effectively wrap business entities and user interface components, simplifying data handling and improving front-end development efficiency with Bootstrap and jQuery.
- Collaborated within an Agile environment using the Atlassian suite (Jira, Confluence, Bitbucket, Bamboo) to manage sprint executions, backlog grooming, and continuous integration processes.

- Provided guidance on modifying legacy systems by using software engineering best practices such as design patterns; demonstrated how to refactor disorganized code to reduce technical debt; and implemented unit testing suites, to ensure high-quality code delivery.
- Produced all project deliverables as per requirements, with many quality improvements to implement separation of concerns, domain service and repository layers, and encapsulation of legacy code with the façade design pattern.
- Delivered high quality, well written, thoroughly tested code for all project deliverables.

Tools used: ASP.NET, MVC.NET and Web Forms; Jira, Confluence, Bitbucket, Bamboo (Atlassian); Bootstrap Framework; C#; HTML/CSS/JavaScript; IIS; jQuery; LINQ; Node/npm; NSubstitute; NUnit; SQL Server; Stored Procs; Version Control Systems; Visual Studio; Windows Server

Best practices: Agile Scrum and Kanban; code reviews; software design patterns; domain driven design; enterprise architected environment; interactive web development; Web portals development; object-oriented software development practices; refactoring; unit testing; cloud-based project management tools

Database: SQL Server

5. AMA (Aug 2016 – Oct 2016)

Full-Stack Web Developer

- Consulting contract at AMA, the Alberta Motor Association, assigned to the Eden project – online driver education admin system replacement.
- Developed a location module to manage all AMA locations organized hierarchically, and present them graphically as a collapsible tree, using Bootstrap Treeview, and created all views based on wireframe mock-ups developed by user experience experts.
- Assisted with development of unit tests and integration tests.
- Took ownership of the first user story “student program selection by location”, for delivery into production.
- Translated user experience (UX) requirements and Balsamiq wireframe mock-ups into responsive UI components in collaboration with subject matter experts (SMEs).
- Engineered a hierarchical location management module using Bootstrap Treeview to present AMA’s province-wide organizational structure in an intuitive, graphical interface.
- Brought pre-vetted expertise in the newly released .NET Core framework to the project, aligning with the Eden project's ground-up architecture.
- Developed a testing suite using xUnit and NSubstitute to verify stability for features within the .NET Core ecosystem.
- Utilized NHibernate as the ORM layer to manage data relationships and communication with the SQL Server backend.
- Took ownership of the "student program selection by location" user story, driving the module through to production readiness.
- Collaborated with the development team to finalize the first production-ready module, ensuring all technical requirements were met for its successful demonstration to key business stakeholders.

Tools used: ASP.NET Core MVC/Web API; Balsamiq Wireframes; Bootstrap Framework; C#; HTML/CSS/JavaScript; IIS; jQuery; LINQ; NHibernate; Node/npm; NSubstitute; Selenium; SQL Server; TFS; XUnit

Best practices: automated testing; code reviews; enterprise architected environment; intuitive user experience; model-view-controller; object-oriented programming and design; object relational model; repository design pattern; requirements analysis; responsive web design; software design

Database: SQL Server

6. DTEK Consulting Services Ltd (Nov 2015 – Jul 2016)

Infrastructure Project #1

- Internal project: full time full-stack developer, network architect, project manager.
- Acted as project manager and network architect to plan, budget, and execute the physical and digital infrastructure rollout for the consulting business.
- Installed ethernet cabling inside the walls, connecting offices together using secure wired connections.
- Built a business network for corporate admin, software development, and web hosting, using modems, routers, switches, servers, registered domain names, static IP's, port-forwarding, virtual hosting.
- Dedicated significant research and development time to master the newly released .NET Core framework, recognizing it as a fundamental shift in the Microsoft ecosystem.
- Developed and deployed a custom company website built from scratch on the early .NET Core platform to evaluate its enterprise readiness.
- Configured and managed the local IIS environment to host the web application, ensuring proper routing and security protocols.
- Installed the 2016 version of .NET Core, and used it to host a custom-built company website.

7. DTEK Consulting Services Ltd (Jun 2015 – Oct 2015)

Documentary Film Maker

- Conducted on-site equipment testing, technical field research, and high-volume data management in the Canadian Rocky Mountains.
- Managed the capture, transfer, and post production editing of several hundred hours of HD video footage using specialized hardware and software tools.
- Engineered and field-tested a mobile technical rig using a helmet-mounted GoPro and specialized audio equipment, optimized for high-vibration motorcycle travel.
- Managed daily end-to-end ETL workflows on location, transferring and indexing massive volumes of daily raw HD footage from GoPro rig to portable computer storage while ensuring data integrity.
- Executed the entire post-production pipeline, using Windows Movie Maker for asset management, timeline editing, audio syncing, and final rendering.
- More information: <https://youtu.be/slg9j-lzTJc>

Tools used: Helmet mounted GoPro and mic; laptop; Windows Movie Maker; USB 2.0; YouTube hosting

8. City of Edmonton (Feb 2013 – May 2015)

Full-Stack Web Developer

- Consulting contract at the City of Edmonton Current Planning, participating in the Future State Project, developing the eServices web portal to provide online access for citizens to conduct all their business needs with the City of Edmonton.
- Engineered application-wide system utilities under the direction of the Technical Lead to address cross-cutting concerns, including authentication, authorization, user profiles, site navigation, browser plugin

detection, disabled JavaScript detection, exception management, remote logging, landing page rotating banner, and standardized corporate branding look-and-feel.

- Implemented a multi-level role-based security model using declarative and imperative security.
- Programmed secure user account lifecycle components, including registration, login, and self-service password recovery workflows.
- Developed the portal's standardized master layout, homepage, and common UI components using Telerik RadControls to ensure a cohesive visual identity.
- Assisted with the refactoring of business logic to follow a layered application architecture utilizing domain layers, repositories, and service-oriented architecture.
- Provided direct technical assistance to the Business Licensing and Land Development teams to ensure seamless integration of their modules into the centralized framework.
- Developed "eStaff", a separate custom portal administration webapp requiring Active Directory authentication, to manage user security profiles and content for the citizen-facing system.
- Participated in the version 2 rollout of the portal: the street vendor business licensing module, utilizing ASP.NET MVC, Entity Framework, Kendo UI, Bootstrap, and Dependency Injection via Autofac.
- Migrated the portal's core security infrastructure from the legacy ASP.NET Membership provider to Microsoft Identity 2.0.
- Resolved complex environment-specific challenges, including browser plugin detection, client-side input validation via Ajax, and MIME-type handling for document uploads within permit applications.
- Collaborated with the QA team to build comprehensive test suites within Team Foundation Server (TFS) and assisted with the migration of source control repositories from SourceSafe to TFS.

Tools used: Ajax; Angular; .NET; Autofac DI; Bootstrap; C#; Colorbox; Entity Framework; HTML/CSS/JavaScript; HTTP Handlers; Microsoft Identity; IIS; jQuery; JSON; Kendo UI; LINQ; Log4Net; MIME Types & Plugins; Modernizr; MVC & Web Forms; Node/npm; Python; ScrumDo; SourceSafe; SSMS; Stored Procs; Telerik (RadControls & Kendo UI); TFS; Unobtrusive jQuery Validation; Web Services; XML Sitemap

Best practices: agile scrum; code reviews; cross-cutting concerns; data driven web development; dependency injection; environment-specific troubleshooting; error handling and logging; layer architecture; model-view-controller; object-oriented design; prototyping; requirements analysis; responsive web design; role-based access control security model (RBAC); service-oriented architecture (SOA); standardized website look-and-feel

Database: SQL Server

9. DTEK Consulting Services Ltd (Feb 2012 – Jan 2013)

University Courses

- Professional development activities: full-time student and academic researcher.
- Took a 3-course sequence from Athabasca University and got straight A's
 - COMP 266 Introduction to web development
 - COMP 348 Network programming
 - COMP 466 Advanced technologies for web-based systems

10. GE (Apr 2011 – Jan 2012)

Software Developer

- Consulting contract at General Electric, Intelligent Platforms.

- Provided software development services for Proficy, GE's manufacturing execution system which implements manufacturing industry standards and best practices.
- Assisted with projects for localization, logout automation, and migration from desktop to browser.

Tools used: .NET; Balsamiq; C#; Confluence; Daemon Tools; IIS; IL Spy; LINQ; NUnit; Python; ReSharper; Silverlight; SQL Server; Subversion SVN; Team City; TFS; Visual Build Pro; Visual Studio; WCF; WPF; XAML

Best practices: agile; build automation; code reviews; continuous integration; MVVM and MVC design pattern; object/relational data mapping service; object-oriented development; SOA; unit testing

Database: SQL Server

11. Government of Alberta (Sep 2009 – Mar 2011)

Systems Analyst

- Consulting contract at the Govt. of Alberta (GOA), Dept. of Energy, supporting the following applications: corporate accounting & reporting system (CARS2), quarterly reporting, information letters, oil royalty & tenure web forums, time entry & reporting system (TEARS), Contract Mgmt. System (CMS), contract compiler, freehold mineral tax.
- Developed and maintained applications within the Government of Alberta Enterprise Architecture framework (GAEA), ensuring all solutions adhered to standardized corporate security, data, and architectural mandates.
- Executed critical technical tasks for the high-priority Capacity Planning Project, successfully migrating core applications onto new enterprise servers.
- Managed low-level server infrastructure components during the Capacity Planning Project migrations, including Windows Server configuration, IIS website creation, DNS networking adjustments, and Windows Server Cluster Management tools.
- Configured and managed security controls during Capacity Planning Project server transitions, including SSL certificate creation, Azman Authorization Manager, and the administration of encryption-controlled database access.
- Supported enterprise service-oriented communications by configuring complex .NET Remoting architectures across distributed network environments.
- Assisted in modernizing legacy database infrastructure by migrating the CMS relational backend from Oracle to SQL Server.
- Performed comprehensive system testing for CARS2, executing regression test suites and logging critical defects within HP Quality Center to guarantee financial system stability.
- Participated in the structured requirements definition phase for a proposed Job Management batch scheduling tool, collaborating with design teams to engineer detailed business use-case documentation.
- Developed custom business intelligence reporting solutions using SSRS and Crystal Reports to directly support quarterly financial disclosure and executive decision-making.
- Prepared formalized operational documentation, including step-by-step deployment procedures, data migration maps, and department-wide disaster recovery plans.
- Participated in planned application upgrade releases, system integration testing, disaster recovery planning and testing; documented use cases, deployment procedures, migration and disaster recovery plans.

Tools used: ASP.NET; Azman; C#; Classic ASP; Cluster Administrator; ColdFusion; Crystal Reports; HP Quality Center; HTML/CSS/JavaScript; Ibatis; IIS; Infragistics; Log4net; Microsoft Office; Microsoft Project; Microsoft Access; .Net Remoting; Oracle; SOAP; SharePoint; SSMS; SSRS; Stored Procs & Triggers; T-SQL; Unix; VB6; VBScript; Visual SourceSafe

Best practices: capacity planning; code reviews; database migration; encryption; enterprise architecture (GAEA); N-tier architecture; object-oriented development; regression testing; server cluster management; source control; systems analysis; test driven development; UML; unit testing

Database: SQL Server; Oracle; Access

12. Sierra Systems, Edmonton (2001 – 2009)

I.T. Consultant

- Delivered complex enterprise solutions for major public sector clients.
- Maintained continuous engagement through a mix of client contracts, and professional development.

Primary Clients

- Workers Compensation Board of Alberta, .NET Developer (May 2006 – Dec 2008)
- Edmonton Police Service, Systems Analyst, Police Records Management System (Apr 2001 – Apr 2006)

13. Workers' Compensation Board of Alberta (May 2006 - Dec 2008)

Application Lead and Web Developer

- Served as Application Lead and primary developer for the Loss Control Reporting web application, managing dual backend databases consisting of a SQL Server transaction repository and a DB2 data warehouse.
- Led a team of developers to design and implement a service-oriented architecture interface enabling the automated electronic delivery of financial invoices from PeopleSoft Financials.
- Utilized unified modeling language to author detailed software design blueprints, including system use cases, sequence diagrams, object models, and deployment diagrams.
- Managed the database migration of the core application data repository from SQL Server 2000 to SQL Server 2005.
- Designed, engineered, and delivered full-stack application enhancements, including custom SQL release scripts, data correction workflows, and Crystal Reports integration architectures.
- Maintained and optimized continuous integration systems by collaborating on the build automation of dedicated application deployment machines using NAnt.
- Provided tier-three technical support for critical commercial off-the-shelf packages, including the PC-Bond fixed income financial analytics system and the Mitrastech corporate legal management system.
- Stepped in as the interim application support coordinator for the Direct Employer Clearance Certificates web application, ensuring uninterrupted operational uptime.
- Authored comprehensive technical documentation, including software design specifications, development effort estimates, and deployment protocols following standard ITIL guidelines.

Tools used: ASP.NET; BPWin; Business Objects; C#; Crystal Reports; DB2; HTML/CSS/JavaScript; IIS; jQuery; Lotus Notes; NAnt; Python; SOAP; SSMS; SSRS; Stored Procedures & Triggers; T-SQL; VB.NET; Visual SourceSafe; WinBatch; Windows Server; WinMerge; XML; XSLT

Best practices: agile scrum; build automation; commercial off the shelf software support; data warehousing; database migration; enterprise architecture; ITIL practices; layered architecture; service-oriented architecture; systems analysis; test-driven development; unified modeling language documentation

Database: SQL Server; DB2 Data Warehouse

14. Edmonton Police Service (Apr 2001 - Apr 2006)

Systems Analyst and Technical Architect

- Provided mission-critical application support and systems analysis for PROBE, the primary Records Management System used by the Edmonton Police Service.
- Served as the core PROBE records management system subject matter expert for the PLATO project, analyzing and mapping legacy business logic and data workflows to ensure accurate functional migration into the new EPROS application.
- Collaborated on the provincial APSNet web-based distributed intelligence-sharing application, building secure queries against the core records management database.
- Engineered and tested the remote authentication component for APSNet, coordinating technical deployment with IT leadership across the RCMP, Calgary, Lethbridge, and Medicine Hat police services.
- Modernized law enforcement workflows by designing and developing custom integration interfaces to external national and provincial databases, including CPIC, JOIN, and BWI.
- Updated critical infrastructure interfaces for the automated photo-radar and red-light camera ticketing systems to ensure seamless municipal data validation and transfer.
- Adapted core application logic to strictly comply with complex legislative changes, including the provincial Traffic Safety Act and the federal Youth Criminal Justice Act.
- Developed specialized database analysis reporting tools to identify high-risk driving patterns, directly supporting targeted traffic safety enforcement operations.
- Formulated comprehensive software engineering blueprints using unified modeling language, authoring business use cases, system diagrams, and data validation protocols.
- Designed and built a custom web-based course evaluation system for the internal police training division using the .NET framework to automate statistical analysis.

Tools used: C/C++; Eclipse IDE; Java; JDK; JNDI; JUnit; LDAP; Oracle Forms and Reports; PGP Encryption; Perl; PL/SQL; SQL Loader; SQL Plus; VAX/VMS

Best practices: automated batch processing; business analysis; data conversion; electronic data transfer; extract transform load; legislative compliance; mission critical support; quality assurance; remote authentication; requirements analysis; secure data encryption; system integration testing; technical architecture

Database: Oracle

15. Imaging Solutions Ltd (Sep 2000 - Mar 2001)

I.T. Consultant

- Client: Government of Alberta, Tax and Revenue Administration - TRA (see below)

16. Government of Alberta, Tax and Revenue Administration (Sep 2000 - Mar 2001)

Software Developer and System Tester

- Participated in the Mainframe Migration Release Two (MMR2) project to transition the provincial corporate income tax systems from a mainframe environment to a modern client-server architecture.
- Programmed core application logic from detailed specifications, focusing heavily on the corporate tax registration and tax-return assessment modules.
- Led the system integration testing team to systematically identify, track, and resolve critical technical defects prior to user acceptance testing.

- Investigated and resolved complex application issues raised by business users during the critical user acceptance testing phase to guarantee system stability.
- Engineered custom data processing utilities and automated tasks using Unix and DOS command-line scripting tools.

Tools used: Oracle Developer (Forms, Reports, Procedure Builder); SQL Loader; SQL Plus; Unix and DOS Scripting

Best practices: custom systems development; defect tracking; integration testing; legacy mainframe migration; lifecycle development methodology; regression testing; system testing; waterfall software development lifecycle

Database: Oracle

17. Athabasca University, Computing Services (Sep 1992 - Aug 2000)

Programmer Analyst and Systems Analyst

- Provided mission-critical application support, systems analysis, and troubleshooting for the university's custom-built student registration and course materials inventory systems.
- Investigated and resolved complex application bugs and data issues identified by the institutional user community to ensure high system availability.
- Served as Technical Team Lead for annual policy and procedure modification projects, directing developer teams to adapt underlying business logic to reflect changes in institutional regulations.
- Supported and optimized external operational interfaces connecting core student records system to EPOS telephone registration systems, course materials inventory system, tutor tracking tools, intelligent mailing software, accounts receivable, and inter-library loan networks.
- Participated in the multi-year Athabasca University Student Information Management (AUSIM) enterprise project to replace legacy registrar systems with the SCT Banner third-party ERP package.
- Led a dedicated team of software developers to design, build, test, and deliver critical institutional customizations within the SCT Banner environment.
- Collaborated closely with the Database Administrator to execute complex data mapping, extract, transform, and load workflows to convert legacy relational data into the new Oracle-based Banner system.

Tools used: Banner; C; Embedded SQL & Quel; EPOS Script; HTML; Ingres 4GL; Ingres Report Writer; MAR; Microsoft Office; Microsoft Project; Oracle Forms and Reports; PL/SQL; Perl; Quel; RCS Source Control; SQL; SQL Loader; SQL Plus; TOAD; UNIX/Linux; VAX/VMS; WordPerfect

Best practices: commercial off the shelf packages; custom systems development; database migration; enterprise resource planning implementation; legacy data conversion; legislative compliance; mission critical support; package customization; project management; relational database development; source code control; systems analysis; team leadership

Database: Oracle; Ingres

18. University of Alberta, Computing Science Department, Instructional Support Group (1989, 1991 - 1992)

Instructional Systems Analyst

- Reverse-engineered, modernized, and migrated an academic student marks tracking system from a legacy mainframe environment under the MTS operating system to a distributed Unix environment.
- Architected and rewrote the migrated tracking application completely in C, replacing legacy data structures to securely store operational information in plaintext operating system files.

- Engineered and managed automated laboratory assignment submission and testing utilities to streamline grading workflows for undergraduate computing science courses.
- Provided comprehensive pedagogical support services for undergraduate computing programs, ensuring high-quality instructional delivery and infrastructure reliability.
- Managed a technical group of graduate student teaching assistants, coordinating lab instruction schedules, grading criteria, and administrative responsibilities.
- Administered the departmental student marks database and deployed specialized account distribution software across laboratory networks.

Tools used: C; MTS Mainframe Operating System; Plaintext File Storage; Unix; Unix Shell Scripting

Best practices: academic technology support; automated testing workflows; software reverse engineering; legacy mainframe-to-unix application migration; people management; software redesign; systems administration; team leadership

Database: Plaintext File Systems

19. Dacro Industries Ltd, Engineering Department (1990)

Software Developer

- Engineered and deployed custom PC-based industrial business applications for an Edmonton-based heavy pressure-vessel custom fabricator.
- Designed and built automated software solutions to streamline production scheduling, materials purchasing, and shop-floor employee timesheet entry.
- Developed critical project tracking and labor forecasting models utilizing Gantt charts and automated data compilation workflows.
- Wrote core application modules and database logic completely in C within the MS-DOS operating system environment.
- Implemented and managed data storage, indexing, and retrieval layers using the Codebase IV database engine.
- Authored system documentation, technical user guides, and business spreadsheet templates using WordPerfect and Quattro Pro.

Tools used: C; Codebase IV; MS-DOS; Quattro Pro; WordPerfect

Best practices: custom business solutions; data compilation; Gantt charts; heavy industrial workflows; industrial production scheduling; labour forecasting; project tracking; resource-constrained development; software design

Database: Codebase IV (xBASE relational database engine)

Significant Projects

Infrastructure Project (DTEK, 2025–2026)	Directed a low-code Active Directory domain migration and infrastructure realignment to eliminate legacy dependencies and establish a stable Windows Server 2022 domain environment.
AzureDev (DTEK, 2022–2023)	Designed and built a secured, data-driven .NET MVC reference application to explore cloud hosting capabilities and deployment patterns on the Azure platform.

Online Shopping (DTEK, 2024)	Developed a simulated open-source eCommerce platform to evaluate React versus Angular frameworks using asynchronous programming with RxJS, Redux state management, and AI paired-programming.
PMDB (EPCOR, 2018–2020)	Developed an intranet performance monitoring database system linked with corporate HR directories to implement role-based security permissions and protect data confidentiality.
Registration Renewal (APEGA, 2016–2017)	Engineered and deployed critical system enhancements supporting the digital competency-based work experience evaluation tool for professional engineering applicants.
Eden Project (AMA, 2016)	Analyzed and built full-stack system replacements to modernize the Alberta Motor Association's aging legacy driver education administration platform.
eServices (City of Edmonton, 2013–2015)	Built and expanded an extensible public eServices web portal enabling municipal citizens to securely manage land development projects and business licenses online.
Proficy SOA (GE, 2011–2012)	Implemented a service-oriented architecture manufacturing execution system following ISA95 industry standards to optimize shop-floor production management.
Capacity Planning (Govt. of Alberta, 2011)	Migrated enterprise systems onto updated production server environments while verifying and updating disaster recovery plans to ensure high availability.
CMS Upgrade (Govt. of Alberta, 2009–2010)	Took ownership of database code modernization for the Contract Management System, translating massive volumes of legacy Oracle PL/SQL queries, stored procedures, and triggers into SQL Server T-SQL.
LCR (WCB, 2006–2008)	Acted as primary support analyst and lead web developer managing quarterly releases and full-stack enhancements for the enterprise Loss Control Reporting database system.
PLATO (Edmonton Police Service, 2005–2006)	Served as core PROBE records management system subject matter expert, analyzing and mapping legacy business logic to guide a successful data transition into the new EPROS system.
APSNet (Edmonton Police Service, 2004–2005)	Developed and tested remote authentication models and database query engines for a web-based, province-wide intelligence and data sharing application.
MMR2 (Govt. of Alberta, 2009–2010)	Programmed and tested core client-server application logic to successfully migrate provincial corporate income tax registration and return assessment systems off legacy mainframes.
AUSIM Project (Athabasca University, 1997–2000)	Coordinated legacy data mapping and led developer teams in building custom extensions during the institution-wide migration from custom student systems to the SCT Banner ERP package.
The 'marks' Program (Univ. of Alberta, 1989)	Engineered an interactive Unix database program to manage, grade, and analyze undergraduate computing science student performance data, published as Technical Report TR 90-28.
